

# NFX-Datasheet

**Component :** InsertIt

**Version :** 5.01 | **NOF 2/3**  **NOF 4/5**

**Description :** With this component you can insert lines of text, textfiles or redirects into your pages.  
This component is useful if you want to add the same script to multiple pages, allowing you to maintain a library of script files which are inserted on the pages you want. When changing of these script files you affect all ages that use this script file.  
**Note: For some insert-places you need to enable the publish-Component in the Publish-View !!!!**

<u>Properties</u>	<u>Description</u>
• <b>Insert What? :</b>	Choose what you want to insert using the Component : textlines entered in the component, a textfile or a redirect to an other page.
• <b>Redirect Type :</b>	When you insert a redirect, you choose the redirect-type here : META-Tag, JavaScript, PHP3, ASP or ColdFusion. The last three are serverside-redirects.
• <b>Insert Where? :</b>	When inserting textlines or a textfile you select the place here, where the text is inserted.
• <b>Nr. of Lines :</b>	When inserting textlines set the number of lines here.
• <b>Line x :</b> <b>(optional)</b>	Text for one line to insert.
• <b>File to insert :</b> <b>(required)</b>	When inserting a textfile, select the textfile here.
• <b>Redirect-URL:</b> <b>(required)</b>	To insert an redirect, you select the redirect-utl here.
• <b>Redirect-Time :</b> <b>(required)</b>	How long the original should be displayed before the redirect happens?
