

NFX-Datasheet

Component : LinkDropDown

Version : 3.53 | NOF 2/3 NOF 4/5

Description : This component is used to add a multi-link drop-down list to a page. If link is not chosen for an entry, a free definable separator will be inserted. The default list-entry can also be set. If as the first entry a message (like "Select Product") is required, simply insert no link for that list entry. Now it's easy to link to Autoframe-pages.

<u>Properties</u>	<u>Description</u>
• Insert FORM-tags :	Here you choose if FORM tags will be added before and after the DropDown. Choose „No“ to use the component inside of a form area.
• FORM-Name : (optional)	Here you can enter a name for the generated form. If left empty a default name is used.
• DropDown-Name : (optional)	Here you enter a name for the generated DropDown-Element. If left empty a default name is used.
• DropDown-Action :	Which action do you want to produce with the component - None, link to another site or submit the actual form
• Button-Type :	When choosing "Automatic", the browser will go to the new page immediately after a list item is chosen. With "Button", the user must press the button to go to the selected page. With "Auto & Button" a combination of both types is used.
• Use as Submit :	You can use a button or an image as submit-button. Here you choose what you want to use.
• Button-Text : (required)	Here you enter the text that will be displayed on the button. The button only appears when the Button-Type is set to "Button" or "Auto & Button" when using a button to submit.
• Submit-Image : (required)	Choose the image to use as submit-button here.
• Image-Align :	In the property you choose which alignment you wish for the submit-image relative to the text and the dropdown.
• Open Window ?	This property gives you the possibility to choose if a new window will be opened with the link or not. NOTE: not all browsers make a difference there ! (see readme)
