

# NFX-Datasheet

**Component :** ScriptCaller

**Version :** 3.53 | NOF 2/3  NOF 4/5

**Description :** This Component helps you when you need to call a JavaScript-function. This Component can be used for ANY Function you want to call. It can insert an Image, a Button or a Text which can then call the function! You can also force the Component to 'only' give you the correct text for calling the function.

<u>Properties</u>	<u>Description</u>
• <b>Function-List :</b>	Here you see a list of all known available functions on the actual page. You can choose a name or enter one.
• <b>Function-Name :</b> <b>(required)</b>	Enter the Function-Name here.
• <b>Parameter on Call :</b> <b>(optional)</b>	Enter the parameters you need to call the function. Without the brackets ( ) .
• <b>Def. In Frame :</b> <b>(optional)</b>	In which frame is the function defined ? If you don't have an framed-page simply leave empty.
• <b>Insert Element :</b>	What do you want to insert – an Image, a Button or Text.
• <b>Call On :</b>	On which Mouse-Action the function gets called ?
• <b>Image :</b> <b>(req. For Image)</b>	When you insert an Image you have to select the image to use here.
• <b>Image Name :</b> <b>(optional)</b>	Here you enter a name with which this graphic is referenced internally. If left empty a default name is used. With this name you can use this graphic as a DynamicPicture-Target.
• <b>Alternative Text :</b> <b>(optional)</b>	Here you enter alternative-text which will be displayed if the browser isn't able to load the graphic or if the mousepointer is over the picture.
• <b>Border Width :</b> <b>(optional)</b>	Here you enter the size of the border which will be displayed around the graphic. The default value is 0 (no border).
• <b>Image-Alignment :</b>	Here you choose the alignment for the image. You will NOT see the chosen alignment in page-view unless you modify the settings at the Align-Tab of the Property-Window too.
• <b>Button-Text :</b> <b>(req. For Button)</b>	Here you enter the Text that should appear on the inserted Button – needed when using a button to call the function.
• <b>Insert FORM-Tags :</b>	Do you want to insert FORM-Tags for the button too ?
• <b>Text :</b> <b>(req. For Text)</b>	When using plain text to insert enter this text here.
• <b>Set Statusbar-Text :</b>	Do you want to set a Statusbartext to be shown in the Statusbar when the mouse is over the Image or Text ?
• <b>Statusbar-Text :</b> <b>(optional)</b>	Enter the Statusbartext here.
• <b>Hide JavaScript-Call :</b>	When this property is set to Yes the Link to the function will not be shown in the statusbar.
