

NFX-Datasheet

Component : ScriptCaller

Version : 5.11 | **NOF 2/3** **NOF 4/5**

Description : This Component helps you when you need to call a JavaScript-function. This Component can be used for ANY Function you want to call. It can insert an Image, a Button or a Text which can then call the function! You can also force the Component to 'only' give you the correct text for calling the function.

<u>Properties</u>	<u>Description</u>
• Wizard :	Double-Click this property to open the wizard or choose the Wizard-Tab you want to see first.
• Function-List :	Here you see a list of all known available functions on the actual page. You can choose a name or enter one.
• Function-Name : (required)	Enter the Function-Name here.
• Parameter on Call : (optional)	Enter the parameters you need to call the function. Without the brackets () .
• Def. In Frame : (optional)	In which frame is the function defined ? If you don't have an framed-page simply leave empty.
• Insert Element :	What do you want to insert – an Image, a Button or Text.
• Call On :	On which Mouse-Action the function gets called ?
• Image : (req. For Image)	When you insert an Image you have to select the image to use here.
• Image Name : (optional)	Here you enter a name with which this graphic is referenced internally. If left empty a default name is used. With this name you can use this graphic as a DynamicPicture-Target.
• Alternative Text : (optional)	Here you enter alternative-text which will be displayed if the browser isn't able to load the graphic or if the mousepointer is over the picture.
• Border Width : (optional)	Here you enter the size of the border which will be displayed around the graphic. The default value is 0 (no border).
• Image-Alignment :	Here you choose the alignment for the image. You will NOT see the chosen alignment in page-view unless you modify the settings at the Align-Tab of the Property-Window too.
• Button-Text : (req. For Button)	Here you enter the Text that should appear on the inserted Button – needed when using an button to call the function.
• Insert FORM-Tags :	Do you want to insert FORM-Tags for the button too ?
• Text : (req. For Text)	When using plain text to insert enter this text here.
• Set Statusbar-Text :	Do you want to set an Statusbartext to be shown in the Statusbar when the mouse is over the Image or Text ?
• Statusbar-Text :	Enter the Statusbartext here.
• Hide JavaScript-Call :	When this property is set to Yes the Link to the function will not be shown in the statusbar.
• Use Custom-HTML :	Here you choose if the Custom-HTML entered in the Wizard is inserted when publishing or not.
