

# NFX-Datasheet

Component : SiteProtector

Version : 3.52 | NOF 2/3  NOF 4/5

**Description :** This is a component from my Script-Component-Collection. You can choose to call the code automatically or manually , as needed. The component inserts JavaScript code to password-protect your sites. The password for the protected page is defined by the user.

<u>Properties</u>	<u>Description</u>
<ul style="list-style-type: none"><li>• <b>Function-Name :</b> (optional)</li></ul>	Here you enter a name for the JavaScript function. The name will be used to call the function and must be <b>unique</b> for this page. You will need this name when choosing to call the function manually. When left empty, a default-name will be used.
<ul style="list-style-type: none"><li>• <b>Call Type :</b></li></ul>	Choose how to call the function : automatically or manually.
<ul style="list-style-type: none"><li>• <b>Use in Autoframes :</b></li></ul>	With this property you choose if you want to link to Autoframe-pages. In this case and according to the link target some NOF-Autoframe-specific things will be generated.
<ul style="list-style-type: none"><li>• <b>Link Target :</b> (optional)</li></ul>	Here you enter the name of the frame or window where the resulting page will be displayed.
<ul style="list-style-type: none"><li>• <b>Prompt Message :</b> (required)</li></ul>	This message will be shown in the MessageBox where the user have to insert the password.
<ul style="list-style-type: none"><li>• <b>Try-Again-Message :</b> (required)</li></ul>	This message will be shown when the user has inserted a wrong password. The user can try again.
<ul style="list-style-type: none"><li>• <b>Access-Denied Page :</b> (optional)</li></ul>	Here you set the Access-Denied-Page. When left empty the last visited page will used. <b>If there is no last page in the history the actual page is used !!</b>
<ul style="list-style-type: none"><li>• <b>Number of Try's :</b></li></ul>	Here you choose the allowed number of trys.
<ul style="list-style-type: none"><li>• <b>Anti-Bookmarking :</b></li></ul>	Here you can choose between the available anti-bookmarking technics included in the component.
